                                                                                                                                                                                                                                                         The sequence represents the mouse antibody 21.6 heavy chain variable region directed against leukocyte adhesion molecule VLA-4. Cloned CoMs sequences of mouse 21.6 VH and VL (see AAQ99889) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAQ99895-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized heavy chain, amino acids H27, H28, H39, H30, H44 nd H71 in the human HC VR framework are replaced by the amino acid present in the equivalent position of the mouse transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and to that inflammatory diseases such as multiple sclerosis. They meningitis or encephalitis. The antibodies can also be used for anti-inflammatory alseases such as multiple cerebral traumas, meningitis or encephalitis. The antibodies can also be used for anti-inflammatory diseases when the cerebral traumas, anti-inflammatory diseases such as multiple sclerosis.

This polypeptide comprises the heavy chain variable region (VH) of mouse anti-alpha-4 integrin monoclonal antibody 21.6. The mouse anti-alpha-4 integrin monoclonal antibody 21.6. The complementarity determining regions (CDRs) of the 21.6 VH can be incorporated into a human 21/28/CL framework to produce a claimed humanised 21.6 VH (see AAW22413) and a claimed humanised 21.6 VH (see AAW22413) and a claimed humanised 21.6 contibody that is used in the manufacture of a medicament for treating a disease selected from asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid dementia, transplant rejection, graft versus host disease, tumour metastasis, nephritis, atopic dermattis, psoriasis, myocardial ischaemia, and acute leukocyte mediated lung injury. The antibody may also be used in the affinity purification of alpha-4 integrin generating idiotypic antibodies. The humanised antibodies of the invention have a half-life in the human circulation essentially equivalent to that of naturally occurring human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0; Gaps

The sequence represents the mouse anti-VLA-4 antibody 21.6 heavy chain variable region (without signal sequence). Cloned CDNA CDR sequences of mouse 21.6 variable light and variable heavy regions are linked to human constant framework regions of the REI antibody for the light chain and the 2*CL antibody for the heavy chain in the construction of a humanized artibody against VLA-4. The 5' and 3' ends of the mouse CDNAs are modified using PCR primers (See AAQ9895-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma 1 constant regions. In the humanized light chain, amino acids L45, L49, L58 and L69 in the human kappa LVCR framework are replaced by the amino contain. Plasmids encoding the chimeric antibodies are transfected into COS chain. Plasmids encoding the chimeric antibodies are transfected into COS clist. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and to treat inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VML-4, for affinity purification or for generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DPKFQGKATITADISSNTAYLQLSSLTSEDTAVYFCAREGYYGNYGVYAMDYWGQGTSVT 139

A recombinant vector for the expression of the heavy and light chain DNA mols. Was prepd., and used to transform a host cell. The host light chain DNA mols. sepd. and connected with a peptide linker to produce a single stranded fv region. The reshaped fv region has low human antigenicity, and is therefore expected to be useful as an agent for the diagnosis and treatment of cerebral tumours,
                                                                                                                                                                      Reshaped anti-human myeloblastoma cell human antibody - has low human antigenicity, and is therefore useful for diagnosis and treatment of cerebral tumours, e.g. myeloblastoma

```

```
The heavy chain variable region of murine MAb 84.66 was cloned and sequenced. It was used to produce mouse V-human C antibodies with high affinity for CEA. Chimaeric murine-human anti-CEA Abs are used to diagnose human colon adenocarcinomas.

                                                                                                                                                                                                                                                                                                                                                                                                                               The gene fragment encoding the V heavy chain region is used to produce a genetically engineered antibody capable of reacting specifically with feline calcivirus (FCV). The antibody can be used to treat, prevent and diagnose FCV infection. It has a broad virus-neutralising spectrum and can be used to neutralise viruses which have acquired immunity to other neutralising antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MKCSWVMFFLMAVVTGVNSEVQLQQSGAELVKPGASVKLSCTASGFNIKDTYIHCVKQRP 60
                                                                                                                                                                                                                                                                                                                                       Anti-feline calcivirus recombinant antibody - used to treat, prevent and diagnosis infection and is safe but effective in cats
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Complementarity determining region; CDR; heavy chain; treatment; variable region; murine; mouse; human; interleukin 5; IL-5; receptor; alpha chain; monoclonal antibody; hybridoma; detection; assay; diagnosis; allergic respiratory disease; chronic bronchitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAQ94485 is the plasmid pUC-M21-V(H), which encodes AAR76664 the murine antibody ONS-21 variable heavy chain. The plasmid was used in the construction of an expression vector, coneg. cDNA encoding a human/murine chimeric antibody, reactive with human meduiloblastoma (a brain tumour) cells. The chimeric antibody can be used in the diagnosis and treatment of this
                                                                                                                                                                                                                                                                                                                                                           Reconstituted antibody against human medullo:blastoma cells - contains high proportion of human antibody origin and has low
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              V heavy chain of recombinant anti-feline calcivirus antibody

                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is the heavy chain variable region of the murine anti-human interleukin 5 receptor alpha chain (hIL-5R alpha) monoclonal antibody (MAD) KM1486. KM1486 is produced by the hybridoma FERM BP-5651, which was prepared by immunising Balb/c mice with hIL-5R alpha, fusing splean cells obtained from the mice with mouse myeloma P3-U1 cells and screening the resultant hybridomas. The MAD can be used to detect or assay for hIL-5R alpha and cells expressing it on their surface, especially to diagnose allergic respiratory diseases, e.g. chronic bronchitis. It can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EQGLEWIGRIDPANGYTKYDPKFQGKATITADTSSNTAYLQLSSLTSEDTAVYFCAREGY 120

This sequence represents the human monoclonal antibody (Mab) #117-10C

heavy chain variable region which is used in a method involved in

neutralising IL-18 or to treat autoimmune diseases or as an

meutralising IL-18 or to treat autoimmune diseases or as an

immuosuppressant using anti-IL-18 antibodies which can inhibit IL-18

Such antibodies can also be used to detect the IL-18 receptor protein

(labelled with an enzyme or a radioactive or fluorescent substance). The

protein is used to treat e.g. graft rejection, pernicious anaemia,

catrophic gastritis, insulin-resistant diabetes, Wegener granulomatosis,

discoid lupus erythematosis, ulcerative colitis, cold-agglutinin-relating

diseases, Goodpastures syndrome, primary biliary cirrhosis, sympathetic

cophrhalmitis, hyperthyroidism, juvenile onset type diabetes, Sjogren

cyptrome, autoimmune hepatitis, autoimmune haemolytic anaemia, myasthenia

Sequence 142 AA;

S

```
The sequence represents the human reshaped antibody 21.6 heavy chain variable region against leukocyte adhesion molecule VLA-4.

Cloned cDNA sequences of mouse 21.6 VH (AAQ9983) and VL (AAQ99889) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (AAQ99895-98) and then subcloned into mammalian cell expression vectors containing human caps H17, H28, H29, H30, H44 and H71 in the humanized heavy chain, amino acids H17, H28, H29, H30, H44 and H71 in the human HC VR framework are replaced by the amino acid present in the equivalent position of the mouse 21.6 Ig H chain. Plasmids encoding the chimeric antibodies can be used to inhibit adhesion of a leukocyte to an artibodies can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used in the treatment of stroke, also be used in the treatment of stroke, also be used in the treatment of stroke.
                                                                                                                                             Humanized antibody; leukocyte adhesion molecule; VLA-4; therapeutic;
                                                                                                                 Human VLA-4 reshaped antibody 21.6 light heavy variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New humanised antibodies against VLA-4 - used for inhibiting leukocyte adhesion to endothelial cells, partic. for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                         This polypeptide, designated Ha, comprises the heavy chain variable region (VH) of a humanised alpha-4 integrin antibody 21.6 (see also AAM22413). It is composed of complementarity determining regions from the VH region (see AAW22410) of mouse alpha-4 integrin monoclonal antibody 21.6 and a modified human 21/28 CL framework. It can be expressed in mammalian host cells following PCR amplification and mutagenesis of appropriate mouse and human DNA sequences. The mutagenesis of appropriate mouse and human bNA sequences. The mutagenesis of appropriate mouse and human bNA sequences. The mutagenesis of appropriate following PCR amplification and humanised 21.6 VH (see AAW22412) can be used to produce a claimed humanised 21.6 antibody that is useful in the manufacture of a medicammatory bowel disease, rheumour arthritis, transplant rejection, graft versus host disease, tumour metastasis, nephritis, archic dermattis, sportasis, mycoardial arthritis, and acute leukcoyte mediated lung injury. The humanised antibody has a half-life in the human circulation essentially equivalent to that of naturally occurring human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

```
The present sequence represents the heavy chain variable region of the murine antibody IF1. The antibody has a binding specificity to B7 molecules. The antibody is used to construct humanized immunoglobulins, which comprise an antigen binding region of non-human origin and a bortion of a human immunoglobulin. The humanized immunoglobulins are useful for treating autoimmune diseases, infectious diseases, inflammatory disorders, systemic lupus erythematosus, diabetes inflammatory dermatitis, asthma, arthritis, inflammatory bowel disease, also useful for treating a transplant recipient or preventing transplant recipient, and multiple sclerosis. The immunoglobulins are also useful for treating a transplant recipient, and treating proliferative disease (leukemia, lymphoma and cancer), anaemia (sickle-cell amemia, disease thalassemia and aplastic aneamia), inborn errors of metabolism, congenital immunodeficiency diseases, and myeloid dysplasia syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Humanized immunoglobulin having a binding specificity to B7-1 (derived from ATCC PTA-263), or B7-2 (derived from ATCC CRL-12524) molecules, modulates immune responses and can therefore treat e.g. autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 EQGLEWIGRIDPANGYTKYDPKFQGKATITADTSSNTAYLQLSSLTSEDTAVYFCAREGY 120

ARM95946-R95948 represent sequences for variable regions of an antibody produced by the hybridoma cell line HNK-20. This sequence represents the actioned with a cell line, that produces IgA sequence represents in the action of respiratory syncytial virus (RSV). The DNA encoding glycoprotein of respiratory syncytial virus (RSV). The DNA encoding untranslated region of the variable region, and for the intromovanteem of the rearranged J region (see AAT30459-T30545 for primer sequences). The DNA encoding these sequences can be inserted into vectors containing heterologous (such as human) constant region genes, for the production of chimeric and isotype-switched antibodies. The antibodies are useful in the treatment and diagnosis of infection by RSV, such as concaining the variable region genes can be isotated without producing as a template, variable region genes can be isotated without producing the reagments that have to be adapted for recombinant antibody expression.
                                                                                          Antibody; HNK-20; variable heavy chain; hybridoma; murine; IgA; mouse; F glycoprotein; respiratory syncytial virus; RSV; constant region gene; chimeric antibody; isotype-switched antibody; therapy; infection; human; pneumonia; bronchiolitis; animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Also, by using the genomic DNA, no knowledge of the DNA sequence encoding the target variable region is required. Chimeric antibodies produced from these proteins, that contain the constant region of the host being treated, are less likely to cause adverse immune reactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 EQGLEWIGWIDPENGNTVYDPKFQGKASITADISSNTAYLQLSSLASEDTAVYXCA---Y 117

The sequence encodes the mouse antibody 21.6 heavy chain variable region. Ha, directed against leukocyte adhesion molecule VLA-4. Cloned cDNA sequences of mouse 21.6 VL and VN (AAQ99889 and AAQ99892) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAQ99895-98) and then subcloned into constant regions. In the humanized light chain, amino acids L45. L58 and L69 in the humanized light chain, amino acids L45. L88 and L69 in the humanized light chain, amino acids research in the equivalent position of the mouse cransfected into COS cells. The humanized antibodies are transfected into COS cells. The humanized antibodies can be used for inhibiting adhesion of a leukocyte to an endothelial cell and contracting inflammatory diseases such as multiple sclerosis. They

```
The present sequence represents the heavy chain variable region of the humanised murine antibody IP1. The antibody has a binding specificity to by molecules. The antibody is used to construct humanized immunoglobulins, which comprise an antigen binding region of non-human immunoglobulins, which comprise an antigen binding region of non-human immunoglobulins are useful for treating autoimmune diseases, infectious diseases, inflammatory disorders, systemic lupus erythematosus, diabetes inflammatory dermatitis, and multiple sclerosis. The immunoglobulins are also useful for treating a transplant recipient, and treating proliferative disease (leukemia, lymphoma and cancer), anaemia (sickle-cell anaemia, thanbasemia and aplastic anaemia), inborn errors of metabolism, congenital immunodeficiency diseases, and mysloid dysplasia syndrome.

Patent No. 5840299
GENERAL INFORMATION:
APPLICANT: Bendig, Mary M.
APPLICANT: Leger, Olivier J.
APPLICANT: Saidanha, Jose
APPLICANT: Jones, S. Tarran
TITLE OF INVENTION: Humanized Antibodies Against Leukocyte
TITLE OF INVENTION: Adhesion Molecule VLA-4
NUMBER OF SEQUENCES: 45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                / Match 75.3%; Score 562; DB 2; Length 125; Local Similarity 89.4%; Pred. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
